To Whom It May Concern:

This letter is to recommend Sergio Alejandro Marchena Gordillo, who I got to mentor during his internship at IBM. Specifically, I mentored him on Linux and scripting development which further increased his knowledge of the command line interface.

Even though his internship was only for one month, he was quick to learn as he already had background through his academic work. He completed all tasks that were assigned to him and additional tasks that were optional. Mr. Marchena Gordillo, not only was quick to learn new technology, but he is exceptional at switching from task to task in a short amount of time. I can certainly attest to this young man's skills and know that he can succeed in the opportunities presented to him.

Sincerely,

Gabriel Toral

To Whom It May Concern:

It has been my pleasure to help mentor and guide Mr. Sergio Alejandro Marchena Gordillo for a considerable amount of time during his one month long internship at IBM in Costa Mesa, CA, USA.

Mr. Marchena Gordillo has demonstrated that he is a fast learner who is motivated and dedicated to deepening his computer industry skills. He is a self-starter and is not afraid of challenges. Mr. Marchena Gordillo exhibited a creative mindset that allowed him to identify a project where to apply his newly found skills as well as showed commitment to see the project through completion. His problem solving skills proved to be an asset and I was impressed by his command of the English language even though he is not a native speaker.

I believe that Mr. Marchena Gordillo would be an asset to any company or team in the computer industry. Please feel free to reach out to me if I may expand on my recommendation.
